Professional Summary

AI Engineer with 16+ months of professional experience (6-month internship + 10 months full-time) building and deploying production-grade AI chatbots, LLM-powered agents, and data engineering pipelines on cloud platforms. Hands-on expertise with Databricks, AWS, LangGraph, and agentic AI architectures. Proven ability to lead cross-functional projects, manage interns, and deliver high-quality results to enterprise clients. Passionate about Generative AI, LLMs, and scalable data solutions.

Professional Experience

AI Engineer at InfiGen AI

Full-Time

Intern → Full-Time (promoted)

Hyderabad, India (On-site)

July 2024 – Present

January 2024 – June 2024

Enterprise AI Chatbot V1 – Production System

- Contributed to and extended a production-grade enterprise AI chatbot built with Python, Chainlit, AWS (EC2, S3, CloudWatch, DynamoDB), Docker, Kubernetes, and Helm; integrated with Databricks SQL Warehouse and Mosaic AI Gateway for enterprise chatbot and analytics workflows.
- Expanded the chatbot to support five new therapeutic business verticals (ONC Sales, HIV PCA, PBC, PBC MR, HIV Tx), enabling data-driven Q&A for end business users across structured datasets and domain-specific business workflows.
- Integrated AWS Bedrock foundation models and DuckDB for high-performance in-memory analytical queries and faster analytical response generation.

Enterprise AI Chatbot V2 – Agentic AI Platform

- Contributed to and extended a modular agentic AI platform (React + FastAPI) with a multi-agent architecture including NLQ, Orchestrator, Chat Manager, and data agents; integrated with Databricks and OpenSearch for structured and retrieval-based workflows.
- Independently designed and built a Semi-Structured Data Agent and an Unstructured Data Agent (OpenSearch-backed), enabling the platform to handle diverse, mixed-format, and document-heavy data beyond structured SQL queries.
- Built a BYOD (Bring Your Own Data) agent allowing users to upload documents and receive answers grounded solely in the uploaded content – enabling self-serve document Q&A without touching the underlying database.
- Engineered agents using LangGraph and Pydantic AI; deployed the full stack via Docker and Kubernetes, achieving scalable multi-agent orchestration across specialized data workflows.
- Delivered new features incrementally to end users while maintaining system reliability and uptime.

Databricks Data Engineering & Analytics

- Performed deep analytical work on Databricks, managing Unity Catalog, Hive Metastore, and SQL Warehouses; used MLflow for experiment tracking and model serving endpoints.
- Developed a custom JavaScript widget integrating the Databricks Genie API, enabling seamless chatbot embedding into client portals with a tailored UI.
- Delivered ad hoc analyses and rapid prototypes in response to client requests, accelerating time-to-insight across multiple enterprise accounts.
- Developed a predictive ML model on Databricks to forecast patient drop-off risk at the doctor level – estimating the number of patients likely to discontinue a client drug based on doctor behaviour, patient profiles, and historical alert patterns triggered for sales reps prior to doctor visits.

Technical Team Lead – Enterprise Pharma & Life Sciences Clients

- Managed multiple concurrent AI and data projects for enterprise pharma clients, consistently delivering beyond agreed deliverables – proactively identifying system improvement opportunities and presenting actionable recommendations to clients.
- Conducted client-facing meetings and technical presentations, communicating progress, insights, and strategic suggestions on how the team could bring additional value to client systems and workflows.
- Mentored and managed an intern end-to-end – task assignment, progress tracking, and quality reviews – ensuring timely delivery across active client engagements.
- Coordinated cross-team collaboration using Jira and Confluence for project tracking, sprint planning, and documentation; maintained clear communication across engineering and client stakeholder teams.

Education

Rajiv Gandhi University of Knowledge and Technologies (IIIT Basar)

Bachelor of Technology in Computer Science – CGPA: 9.24 / 10.0

Rajiv Gandhi University of Knowledge and Technologies

Pre-University Course (PUC) – CGPA: 9.15 / 10.0

Basar, Telangana

2021 – 2025

Basar, Telangana

2019 – 2021

Technical Skills

AI & LLM Frameworks:	LangGraph, LangChain, Pydantic AI, AWS, Mosaic AI Gateway, MLflow
Data & Cloud Platforms:	Databricks (Unity Catalog, SQL Warehouse, Genie, Serving Endpoints), AWS (EC2, S3, DynamoDB, CloudWatch), OpenSearch
Languages:	Python, SQL, JavaScript, TypeScript, C, C++
Frameworks & Libraries:	FastAPI, React, Node.js, Express, Chainlit, Pandas, NumPy, Scikit-Learn
DevOps & Infrastructure:	Docker, Kubernetes, Helm, Terraform, Git, GitHub, CI/CD
Databases:	MongoDB, MySQL, Redis, DuckDB, DynamoDB
Data Visualization:	Power BI, Tableau, Matplotlib, Seaborn, Plotly, Chart.js

Selected Projects

RedisChat <i>Redis, React, Node.js, Express, Cloudinary, Upstash</i>	 Repo
- Built a real-time chat application leveraging Upstash Redis, achieving a 40% reduction in message delivery latency compared to traditional polling approaches. - Integrated Cloudinary for image storage and implemented light/dark mode, sound effects, and a fully responsive UI.	
Email Spam Classifier <i>Python, Scikit-Learn, Pandas, TF-IDF, Jupyter Notebook</i>	 Repo
Developed an ML pipeline for email classification (spam vs. non-spam) achieving up to 96.87% accuracy using Naive Bayes and Random Forest with TF-IDF vectorization and NLP preprocessing.	
Amazon Stock Market Analysis Dashboard <i>Microsoft Power BI, Excel</i>	 Repo
Designed an interactive Power BI dashboard with multi-chart views (donut, bar, combo, line) tracking daily, monthly, quarterly, and annual stock performance with drill-down capability.	

Certifications — [View Coursera Profile](#)

IBM DevOps and Software Engineering Professional Certificate <i>(IBM – 13/15 courses completed)</i>	
- Introduction to DevOps - Introduction to Cloud Computing - Introduction to Agile Development and Scrum - Hands-on Introduction to Linux Commands and Shell Scripting - Getting Started with Git and GitHub - Python for Data Science, AI & Development - Developing AI Applications with Python and Flask - Introduction to Containers w/ Docker, Kubernetes &	- OpenShift - Application Development using Microservices and Serverless - Introduction to Test and Behavior Driven Development - Continuous Integration and Continuous Delivery (CI/CD) - Application Security for Developers and DevOps Professionals - Monitoring and Observability for Development and DevOps
